

Badami Store Data Analysis

Transforming raw retail transaction data into actionable business insights for 2022 — covering sales trends, customer behavior, regional performance, and channel analysis.

About the Dataset

Data Type

Retail / E-commerce · Structured (Tabular) · Customer Transaction Level

Numerical Fields

Order ID, Customer ID, Age, Qty, Amount, Ship-postal-code

Categorical Fields

Gender, Status, Channel, City, State

i Used for **customer purchasing analysis** and **business decision-making**

Why This Data Matters

In retail, companies track every customer interaction — what they buy, which channel they use, how much they spend, and who is purchasing more. This data helps Badami Store:

High-Value Customers

Identify top spenders and loyal buyers

Purchase Patterns

Understand buying behavior over time

Regional Optimization

Optimize state-wise purchasing strategy

Marketing & CLV

Improve campaigns and increase customer lifetime value

What Badami Store Needed

Badami Store wants to create an annual sales report for 2022 – so they can understand their customers and grow more sales in 2023.

1

Sales & Orders

Month-wise variation, peak months

2

Customer Behavior

Gender & age group analysis

3

Order Status

Distribution of Delivered, Returned, Cancelled, Refunded

4

Regional & Channel

Top states, platform performance (Amazon, AJIO, Flipkart, Meesho, Myntra)

5

Product Categories

Which categories generate maximum sales

Understanding the Fields

Order ID	Unique ID per order
Cust ID	Unique customer identifier
Gender / Age	Customer demographics
Date / Status	Order date & current status
Channel	Platform: Amazon, AJIO, Flipkart, Meesho, Myntra
SKU / Category	Product code & type
Qty / Amount	Quantity ordered & total sales value
Ship-City / State	Delivery location details

Data Cleaning & Processing

Cleaning Steps (Excel)

- Removed duplicate records
- Handled missing values
- Corrected formatting & standardized dates
- Removed extra spaces (TRIM)
- Corrected inconsistent category names
- Verified data types & accuracy

Analysis Methods

Pivot tables were created to summarize performance across:

- Month-wise sales & orders
- Gender & age group behavior
- Order status distribution
- Top 5 states by sales
- Channel & category performance

Interactive Excel Dashboard

Built with Pivot Charts, Slicers, KPI Cards, Conditional Formatting & Dynamic Filters – enabling stakeholders to analyze sales dynamically by category and region.

Orders vs Sales Monthly bar + line chart	Sales: Men vs Women 64% Women / 36% Men
Order Status 92% Delivered	Top 5 States Regional sales breakdown
Age vs Gender Orders Grouped bar chart	Channel Orders Pie chart by platform

What the Data Revealed

65%

Women Buyers

Women are significantly more likely to purchase than men

50%

Adult Age Group

Ages 30–49 contribute the highest share of orders

80%

Top Channels

Amazon, Flipkart & Myntra drive the majority of orders

Top 5 States by Sales

Maharashtra, Karnataka, and Uttar Pradesh are the top 3 states contributing maximum sales revenue in 2022.

How It Was Built

Microsoft Excel

Primary platform for all data cleaning, processing, and analysis

Pivot Tables & Charts

Summarized sales trends, customer behavior, and channel performance

Slicers & Filters

Dynamic filters for Month, Category, and Channel enabling interactive exploration

Dashboard Design

KPI Cards, Conditional Formatting, and visual layout for stakeholder reporting

CONCLUSION

Key Takeaways & Recommendations

This project transformed raw retail data into meaningful business insights using Excel. The dashboard helps stakeholders monitor performance, identify trends, and make data-driven decisions.

Target Audience

Focus on **women aged 30–49** in **Maharashtra, Karnataka & Uttar Pradesh**

Preferred Channels

Prioritize ads, offers & coupons on **Amazon, Flipkart & Myntra** — they drive 80% of orders

Business Impact

The interactive dashboard enables ongoing monitoring of sales, customer segments, and regional performance to grow revenue in 2023 and beyond
